mubahamas.com

CLIENT

MUB Organization

AUDIT DATE

July 1, 2026

GOAL

Increase applicants & sign-ups

VIEWPORTS

1440px & 390px

The Big Picture

The site looks like it's capturing leads. It isn't.

The design is strong. The application form connects to a live database. But every other system meant to capture interest — the email signup, the contact form, the social media links — is completely broken. They look finished. They send nothing.

Every person who has subscribed to the mailing list has not been added to any list. Every contact inquiry has been discarded. All four social media icons link to a dead anchor. There is no analytics. When anyone shares the site link on social media, the preview is blank.

The fixes are not structural — most are one-line changes. But they need to happen before another applicant cycle begins.

0 EMAILS CAPTURED	0 CONTACT MESSAGES RECEIVED	4 DEAD SOCIAL LINKS	0 ANALYTICS INSTALLED	1 WORKING FORM (APPLICATION ONLY)
--------------------------------	---	----------------------------------	------------------------------------	---

What the site does well

The visual design is genuinely strong. The gold-and-navy palette looks professional. The fonts are well-chosen. The hero section commands attention. The 7-step application form is architecturally sound and connected to a real Supabase database. The Privacy Policy and Terms of Use pages exist and load correctly. The page loads fast — under 250ms to first paint.

What requires immediate attention

Four systems appear to work and do nothing. None require a redesign to fix.

1. The **email subscribe button** shows a success animation and captures no emails
2. The **contact form** shows "Message Sent" and delivers nothing
3. All four **social media icons** (Instagram, Facebook, TikTok, YouTube) link to a dead anchor
4. There are **no analytics** — no visibility into visitor volume, traffic source, or form drop-off

There is also a JavaScript error on every page load that freezes the application form's step counter, and the site has no Open Graph tags, meaning every shared link shows a blank preview on social media.

How Each Area Grades Out

Four lanes evaluated. Each grade reflects how well that area serves the primary goal: more applicants and sign-ups.

DESIGN B+ Strong visual identity and hierarchy. The hero stops a visitor from scrolling. One issue: a text instruction tells users how to interact with the pillar cards instead of the design making it obvious.	COPY B "Apply Now — It's Free" is smart conversion copy. Program details are specific and credible. The hero headline doesn't orient a first-time visitor, and the footer phone number is a placeholder.
UX & ACCESSIBILITY C The application form is well-structured but has a JavaScript bug that freezes the progress header on every step. Pinch-to-zoom is disabled on mobile, violating WCAG 1.4.4. Step 2 of the form contains no input fields.	CONVERSION & SHARING D The most urgent lane. Email capture is fake. Contact form is fake. Social links are dead. No analytics. No Open Graph tags — every social share shows a blank preview. The application form is the only working conversion point.

For the designer: The visual work is strong and doesn't need to be revisited. The urgent work is connecting the forms that look finished to real backends. Items 1–7 in the action plan are all one-line or minimal changes and can be completed in a single session.

How It Looks on a Computer

Captured July 1, 2026 at 1440px — standard laptop or desktop width.

HERO — ABOVE THE FOLD

The hero section is well-executed. Headline, logo, and both CTAs are above the fold. "Apply Now — It's Free" reads clearly. Note: the headline "Beautifully Confident." doesn't tell a cold visitor what the organization is — the small sub-label above the logo carries that weight.

The four pillars are specific and credible. The text "Hover to reveal · Click to expand" is a design symptom — when users need written instructions, the visual affordance has failed. This is a design fix, not a copy fix.

Nine 2025 contestants displayed with portraits, names, and island titles. Horizontal scroll layout works well at desktop width.

Critical finding: this footer contains the email subscribe field, the contact form, and four social media icons. All of these appear functional. None of them work — see Findings 1–4 in the Conversion section.

How It Looks on a Phone

Tested at 390px — iPhone 14 Pro width. Most prospective applicants will arrive on a phone.

MOBILE HERO

The hero adapts well. Headline and CTAs remain readable and proportional.

FULL MOBILE PAGE

The full page stacks correctly on mobile. Sections are readable. The broken footer is at the bottom.

Walking Through the 7-Step Form

The "Apply Now" button was clicked and each step of the application was navigated. One bug was found on step 3 that affects every applicant.

STEP 1 — ELIGIBILITY

A dark-themed mobile app screen for Step 1 of 7: Eligibility. At the top, there's a yellow crown icon and a close button (X). Below the icon, it says "STEP 1 OF 7 — ELIGIBILITY". The main heading is "Eligibility Requirements" in white. A subtext says "Please review and confirm you meet all requirements before proceeding." Below this is a checklist with five items, each preceded by a green checkmark in a square box. The items are: "Bahamian citizen or permanent resident with valid documentation", "Age 18–28 at time of application submission", "Never married, with no dependents", "Strong character, community involvement, and a personal platform", and "Available for all required training, events, and".

- ☒ Bahamian citizen or permanent resident with valid documentation
- ☒ Age 18–28 at time of application submission
- ☒ Never married, with no dependents
- ☒ Strong character, community involvement, and a personal platform
- ☒ Available for all required training, events, and

Step 1 shows a checklist of eligibility requirements. Clear and well-designed.

STEP 2 — HOW TO APPLY (NO INPUT FIELDS)

A dark-themed mobile app screen for Step 1 of 7: Eligibility. At the top, there's a yellow crown icon and a close button (X). Below the icon, it says "STEP 1 OF 7 — ELIGIBILITY". The main heading is "How to Apply" in white. A subtext says "Here is the full journey from application to crowning. You are about to begin Step 1." Below this is a list of three items, each preceded by a yellow square box with a number. The items are: "01 Complete the Online Application" with subtext "Fill in your personal details, platform statement, and upload supporting documents through our secure portal.", "02 Preliminary Interview" with subtext "Selected candidates invited for a one-on-one interview with the MUB panel in Nassau, The Bahamas.", and "03 Ten-Week Training Program" with subtext "Finalists attend the full empowerment program — Personal Development, Business Symposium, community events, and more."

- 01 Complete the Online Application**
Fill in your personal details, platform statement, and upload supporting documents through our secure portal.
- 02 Preliminary Interview**
Selected candidates invited for a one-on-one interview with the MUB panel in Nassau, The Bahamas.
- 03 Ten-Week Training Program**
Finalists attend the full empowerment program — Personal Development, Business Symposium, community events, and more.

Step 2 is purely informational — no form fields. Counts as a step but asks nothing. This inflates the perceived length of the form.

The screenshot shows a dark-themed form interface. At the top, a progress bar is partially filled with orange. To the right of the progress bar is a circular close button with an 'X' icon. Below the progress bar is a yellow line graph icon. The header text reads "STEP 1 OF 7 — ELIGIBILITY". The main title is "Personal Information" in a large, bold, white font. Below the title is a subtitle: "Your basic contact and identity details." The first section is labeled "FIRST NAME" in a bold, yellow font. Below this label is a dark input field.

This screenshot was captured on Step 3 (Personal Information). The header reads "STEP 1 OF 7 — ELIGIBILITY." The footer nav correctly reads "Step 3 of 7." The header is frozen on every step due to a JavaScript error. Every applicant who has used this form has seen the wrong step in the header. See UX Finding 1 for the root cause and fix.

Design: B+

The visual design is doing real work. There are two things worth addressing — one is a design fix, one is a judgment call.

WORKING WELL

The visual identity is professional and credible

The gold-and-navy palette reads as prestigious without being stiff. The font pairing — Cormorant Garamond for headlines and Montserrat for body — is well-chosen. The hero section commands attention. The stat strip (10 Week Program · 700+ Alumni · 30+ Islands) is smart — specific numbers carry more weight than general claims. The contestant portraits are clean and well-framed.

DESIGN ISSUE

"Hover to reveal · Click to expand" signals a broken affordance

The "What We Stand For" section includes the instruction "Hover to reveal · Click to expand" written as a paragraph. When users need to be told how to interact with an element, the visual design isn't communicating it on its own. This is Nielsen heuristic #6 — Recognition over Recall. The fix is visual: a visible bottom border, a small arrow icon, or a partial-text reveal on the pillar cards that signals interactivity without words.

Secondary issue: "Hover to reveal" is a mouse-only affordance. On a phone there is no hover state. Touch visitors read this instruction and have no way to follow it.

The hero headline doesn't orient a cold visitor

"Beautifully Confident." is on-brand. But a first-time visitor arriving from a social share — someone with no prior knowledge of MUB — doesn't immediately know what they're looking at. The small sub-label above the logo ("Official National Pageant · The Bahamas · 2026") carries this orientation, but it's small and reads as metadata rather than an invitation. This is a judgment call, not a rule violation — ambiguous hero headlines can work when the audience already knows the brand. It becomes a liability when cold referral traffic is a primary acquisition channel.

UX: C

The application form is well-structured. Three technical problems affect every visitor — two of them are single-line fixes.

BUG — AFFECTS EVERY APPLICANT

Finding 1: The step counter in the application header never updates

No matter which step of the 7-step form a visitor is on, the header permanently reads "STEP 1 OF 7 — ELIGIBILITY." The footer correctly displays the current step. The header progress bar never moves.

Root cause: Two lines of code that should be inside the `hudGo(n)` function were placed outside it at the top level of the script. At the top level, the variable `n` doesn't exist, throwing a `ReferenceError` that the browser logs on every page load.

```
// ❌ BROKEN — these two lines sit outside hudGo(), `n` is undefined
if(fill) fill.style.width = `${Math.round((n/TOTAL)*100)}%`;
if(label) label.innerHTML = `Step ${n} of ${TOTAL} — ${stepNames[n-1]}`;

function hudGo(n) {
  hudStep = n;
  // ✅ FIX — move both lines here, after hudStep = n
  if(fill) fill.style.width = `${Math.round((n/TOTAL)*100)}%`;
  if(label) label.innerHTML = `Step ${n} of ${TOTAL} — ${stepNames[n-1]}`;
  ...
}
```

This is a 15-minute fix with no design changes required.

Finding 2: Pinch-to-zoom is disabled on mobile

The viewport meta tag contains `maximum-scale=1.0`, which prevents mobile users from zooming in. This violates WCAG 1.4.4 (Resize Text, Level AA), which requires text to be resizable to 200% without loss of content or functionality. The fix is deleting four words.

```
<!-- Current - zoom disabled -->
<meta name="viewport" content="width=device-width,initial-scale=1.0,maximum-scale=1.0">

<!-- Fixed - remove maximum-scale=1.0 -->
<meta name="viewport" content="width=device-width,initial-scale=1.0">
```

UX FRICTION

Finding 3: Step 2 of the form contains no input fields

Step 2 ("How to Apply") is a purely informational screen. It lists the overall process with no form fields. An applicant reads "Step 2 of 7" and thinks they're making progress, but they haven't typed a single character. This makes the form feel longer than it is. Recommendation: move the "How to Apply" content to a screen shown before the form opens, or merge it with the Step 1 eligibility overview. The remaining five steps are all genuine data-entry steps.

MOBILE UX

Finding 4: Validation errors can be off-screen on mobile

When a required field is missed and "Continue" is tapped, the form highlights the empty field with a red border. On mobile, if the invalid field is above the current scroll position, the red border is off-screen and the user sees nothing happen. One line of code fixes this:

```
// After the validation loop, scroll to the first invalid field
if (firstInvalid) firstInvalid.scrollIntoView({ behavior: 'smooth', block: 'center' })
```

Copy: B

Most of the writing is effective. Two things need attention before the next applicant cycle.

WORKING WELL

"Apply Now — It's Free" removes a hesitation before it forms

Appending "It's Free" directly to the call-to-action button is smart. Before a visitor can wonder whether there's an entry fee, the button already answers the question. The Competition Timeline section is also well-executed — it gives prospective applicants specific dates and shows exactly what a 10-week commitment looks like. Specificity builds trust.

FACTUAL PROBLEM

Finding 5: The phone number in the footer is a placeholder

The footer lists **+1 (242) 123-4567**. This is a sequential placeholder — digits 1 through 7 in order. It is not a working number. A journalist, parent, sponsor, or island coordinator who tries to call it will reach a disconnected line or an unaffiliated party. Replace it with a real number or remove the phone field entirely.

JUDGMENT CALL

The four pillar names are good — the body copy repeats itself once

The "About MUB" section uses "platform" as both a form field name (Platform & Vision) and a headline claim ("More Than a Pageant. A Platform."). That's one overloaded word in two consecutive visible sections. Not a critical issue, but worth a look when the copy is next reviewed.

Conversion: D

This is the most urgent section. The findings here are costing applicants right now, with every person who visits the site.

The site grades B+ on design and D on conversion. These two grades describe a site that looks like it's working and isn't.

CRITICAL

Finding 6: The email subscribe button collects zero emails

The footer has an email signup field with a Subscribe button. When someone enters their email and clicks Subscribe, they see a checkmark and a thank-you message. It looks like it worked. No email is saved anywhere.

```
// handleSub() — what it actually does:
function handleSub(btn) {
  if(!inp.value || !inp.value.includes('@')) { return; }

  // No network request. No API call. No database insert.
  // Just a timer that shows a fake confirmation.
  btn.textContent = '✓';
  inp.value = '';
  showSuccessMessage(); // visual only — sends nothing
}
```

Fix: Connect the submit handler to Mailchimp, ConvertKit, or a Supabase subscribers table. The Supabase infrastructure is already live on the page — it just needs a table and a connection call in this function.

CRITICAL

Finding 7: The contact form sends nothing

The footer's "Contact Our Team" form has fields for name, email, phone, topic, and message. When submitted, the button shows "✓ Message Sent" after one second. No message is delivered anywhere.

```
// handleContact() - what it actually does:
function handleContact(btn) {
  btn.textContent = 'Sending...';
  // Waits 1 second then shows fake success.
  // No fetch(). No email. Nothing sent.
  setTimeout(() => {
    btn.textContent = '✓ Message Sent';
  }, 1000);
}
```

Fix: Replace the `setTimeout` with a real `fetch()` to Formspree (free, 15-minute setup) or a Supabase Edge Function.

CRITICAL

Finding 8: All four social media icons link to a dead anchor

The footer shows icons for Instagram, Facebook, TikTok, and YouTube. Every one of them links to "#" — which reloads the current page. For a pageant organization whose primary recruitment channel is social media, dead social links are a direct loss of applicant traffic.

```
<a href="#">IG</a> <!-- Dead -->
<a href="#">FB</a> <!-- Dead -->
<a href="#">TK</a> <!-- Dead -->
<a href="#">YT</a> <!-- Dead -->
```

Fix: Replace each # with the real profile URL. If a channel doesn't have an active profile yet, remove the icon rather than link to a dead end.

Finding 9: No analytics installed

There is no Google Analytics, no Facebook Pixel, no visitor counter of any kind. Without it, no one can answer: How many people visit each week? Where do they come from? How many open the application? Which step do they quit on? Every decision about the website and social strategy is currently being made without data.

Fix: Google Analytics 4 is free. One script tag in `<head>`. Add conversion events on HUD open and form submission.

HIGH PRIORITY

Finding 10: No Open Graph tags — every shared link shows a blank preview

When the site URL is shared anywhere — an Instagram bio, a WhatsApp message, a Facebook post — the preview that appears is completely blank. No image, no title, no description. This is because the site's <head> contains no Open Graph or Twitter Card meta tags. Currently the entire meta section contains a single tag:

```
<!-- Current: only one meta tag -->
<meta name="viewport" content="...">

<!-- Add these 8 lines to <head> -->
<meta name="description" content="Miss Universe Bahamas — a ten-week empowerment program" />
<meta property="og:type" content="website">
<meta property="og:url" content="https://www.mubahamas.com/">
<meta property="og:title" content="Miss Universe Bahamas 2026 — Apply Now">
<meta property="og:description" content="Ten-week program. 700+ alumni. 30+ islands.">
<meta property="og:image" content="[URL to hero image at 1200x630]">
<meta name="twitter:card" content="summary_large_image">
<meta name="twitter:image" content="[same image URL]">
```

These 8 lines would immediately make every shared link show a rich preview — image, title, and description — which significantly increases click-through from social posts.

GOOD NEWS

Finding 11: The application form connects to a real database

The 7-step application form is properly connected to a live Supabase instance. When a user completes all steps and submits, their data is posted to the database and a confirmation email is triggered via a Supabase Edge Function. The submission function is correctly declared as async. This is the most technically complex part of the site — and it's the part that actually works.

What to Fix and In What Order

Ranked by impact on the primary goal: more applicants and sign-ups. The most impactful fixes are also the fastest.

#	FIX	WHY IT MATTERS	EFFORT
1	Add Open Graph & Twitter Card meta tags	Every shared link currently shows blank. 8 lines in <head> fix every future share.	QUICK
2	Install Google Analytics 4	No visibility into anything without this. One script tag in <head>.	QUICK
3	Fix 4 dead social media links	Replace each href="#" with the real profile URL. Remove any without an active profile.	QUICK
4	Replace placeholder phone number	+1 (242) 123-4567 is a sequential placeholder. Replace or remove before it damages credibility.	QUICK
5	Fix JavaScript bug — step header frozen	Move 2 lines of code inside hudGo(). Fixes progress header and bar for every applicant.	QUICK
6	Remove maximum-scale=1.0 from viewport	One attribute deletion. Restores pinch-to-zoom. Fixes WCAG 1.4.4 violation.	QUICK
7	Add meta description & canonical tag	Two lines in <head>. Controls the snippet shown in Google search results.	QUICK
8	Wire email subscribe to a real list	Connect handleSub() to Mailchimp, ConvertKit, or Supabase. The DB is already live.	MEDIUM
9	Wire contact form to a real endpoint	Connect handleContact() to Formspree (free, 15 min) or a Supabase Edge Function.	MEDIUM

#	FIX	WHY IT MATTERS	EFFORT
10	Fix validation scroll-to-error on mobile	One line: firstInvalid.scrollIntoView(). Makes invisible errors visible on phones.	MEDIUM
11	Remove Step 2 from the form flow	Move "How to Apply" to a pre-form screen. Remaining 5 steps are all real data entry.	LARGER
12	Replace hover instruction with visual affordance	Design fix: add arrow, border reveal, or partial-text preview to pillar cards.	LARGER
13	Add Schema.org structured data	Event + Organization markup improves Google search rich results. 30–50 lines of JSON-LD.	LARGER

Raw Numbers

Performance

Measured by Playwright with warm cache on July 1, 2026. Real-world mobile times on Caribbean LTE will be higher. A Lighthouse run from a cold cache is recommended.

METRIC	VALUE	NOTES
First Contentful Paint	212 ms	Fast
DOM Content Loaded	93 ms	Fast
Page weight (encoded)	767 KB	Reasonable
Page weight (decoded)	1,184 KB	~1.2 MB — acceptable
External resources	7	Very lean
Console errors on load	1	ReferenceError: n is not defined

Meta Tags

TAG	PRESENT	ACTION
meta viewport	Yes	Remove maximum-scale=1.0
meta description	No	Add 1 line
og:title	No	Add 1 line
og:description	No	Add 1 line
og:image	No	Add 1 line + image URL
og:type	No	Add 1 line
twitter:card	No	Add 1 line

TAG	PRESENT	ACTION
canonical link	No	Add 1 line
Schema.org JSON-LD	No	30–50 lines, lower priority

Links

DESTINATION	STATUS
All in-page nav anchors	Working
